

Help Us Fight a Rare Brain Disease

We are researchers at Cooperative Brain Imaging Institute (CoBIC)-Frankfurt studying GLUT1 Deficiency Syndrome, an ultra-rare neurological disease causing epilepsy, movement disorders, and cognitive impairment from early childhood. These patients suffer greatly, and we need your help.

We are looking for healthy volunteers to undergo a single, non-invasive MRI session (~40 min) at our facility. As a thank-you, a neuroradiologist will review your brain MRI (T2 & FLAIR) and inform you of any findings: free of charge!

We are looking for:

 Male, 53–59 years old

 Female, 18 years old

You are eligible if you:

- Are 18 or older and in good general health
- Have no neurological or psychiatric diagnosis
- Have no metal implants (pacemaker, cochlear implant, aneurysm clips, etc.)
- Have no metallic foreign bodies or non-MRI-compatible implants
- Are not pregnant and not claustrophobic
